CELL O CON COVER BLOCKS

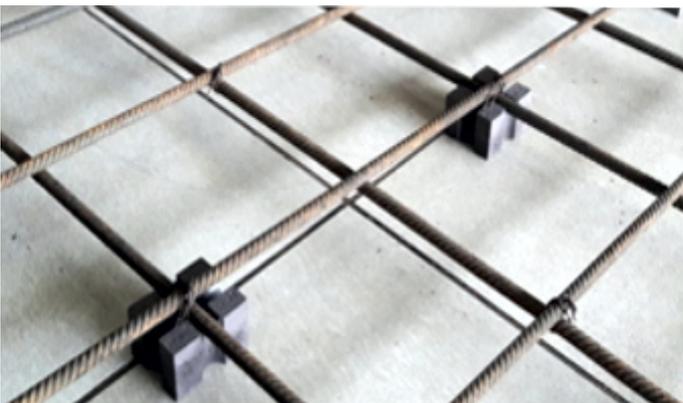

CELL O CON COVER BLOCKS

CELL O CON cover block is manufactured in an Automated Wet mix Special System. CELL O CON cover blocks have high compressive strength and mainly used for Column Beam, Slabs & Retaining wall.

CELL O CON cover block is essentially a spacer that is used to lift the rebar mesh off the ground so that concrete may flow under the rebar. It maintains a specific distance between the TMT bars and the shuttering. For prevention of corrosion of the rebar, it needs to be fully embedded in concrete. By code, it usually needs about 20 mm to 75 mm of coverage on all sides and depends upon structure type.

CELL O CON cover block lifts the rebar up by about 20 mm to 75 mm and becomes a permanent and integral part of the poured concrete, ensuring that no part of the rebar sags and minimizes the required the concrete coverage during the pouring of concrete.

CELL O CON Cover Blocks are made up of sand, stone grid, OPC, white cement and other adhesives which ensure to get M50 Grade of Concrete.

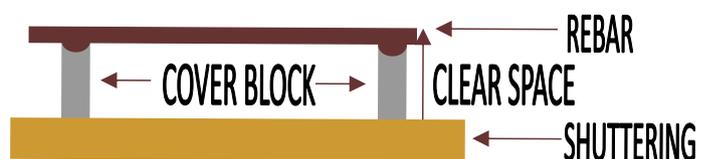

They are dimensionally accurate and are used to ensure that the specified cover to the reinforcement for structures and structural elements is achieved, both before and during concreting.

Cover block offer ideal spacer for any application. All Block spacers comply with the requirements of the BIS.

CELL O CON COVER BLOCKS - SIZE

Roof	20 mm
Column	40 mm
Beam	25mm - 40 mm
Foundation	50mm - 75mm
Slab	20mm
Wall	25mm
Lintels	25mm

CELL O CON MANHOLE

CELL O CON MANHOLE

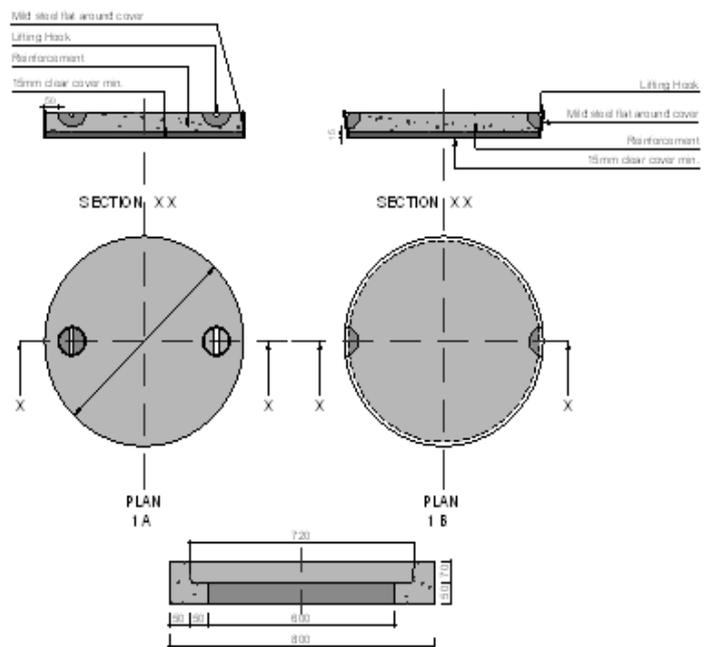

CELL O CON Manhole Cover is a removable plate forming the lid over the opening of a manhole, for a person to pass through, that is used as an access point for an underground vault or pipe.

It is designed to prevent anyone or anything falling from in and to keep out unauthorised person & materials. Manhole cover is otherwise called Maintenance Hole.

CELL O CON Manhole cover is made out of concrete with high compressive strength to withstand the traffic pass-over them.

CELL O CON Manhole cover strictly adheres to Industrial quality, testing norms that leaves no scope of error in production.

CELL O CON Manhole covers come in 4 grade categories with different shapes (Round, Square, Rectangle etc) Light Duty, Medium Duty, Heavy Duty, Extra Heavy Duty
