CELL O CON PRECAST FENCING

CELL O CON PRECAST FENCING

CELL O CON PRECAST FENCING SYSTEM Concrete precast walling is the most cost-effective walling option. It is installed between properties as well as on front street boundaries. It is also widely used to fence off amenities and other structures on a property. Our attractive range of precast walls range from 1.5 to 3.6m in height.

CELL O CON PRECAST FENCING - ADVANTAGES

CELL O CON Precast Fencing is offering an innovative collection with high strength, superior quality, robustness, longer service life & eco friendly Precast Fencing walls, which are sturdy, accurate in dimensions, smooth finish, affordable & excellent design. Many builders opt for compound wall with regular method of brick masonry. However, a concrete precast fence is a better choice for securing property. It is extremely durable and attractive. In the long run precast fencing will be stronger and durable.

CELL O CON has done extensive research and development in finding a way to make precast concrete fencing, a more cost effective in its production process.

CELL O CON PRECAST FENCING - FINISHES

CELL O CON Precast Fencing system comes in 3 different concrete finishes all poured into solid forms. They are composed of rebar reinforced concrete and able to withstand high winds. They are so durable that they can last long.

CELL O CON Precast Fencing system delivers a uniform, durable, stucco finish that can easily match surrounding structures. Unlike traditional stucco, there is no risk of mold or fungus developing from moisture infiltration because it is poured into a solid form and not applied over existing concrete.

CELL O CON Precast Fencing system has reinforced "H" frame of size 150mm to 200mm with 50mm to 75mm width required groove to insert the RCC Panel of 50mm x 75mm thick will be manufactured with high quality and precision up to the height of 3600mm. Very large area will be completed by the CELL O CON Precast Fencing system in a very short time.
